## Throat Lintels and Gather Units

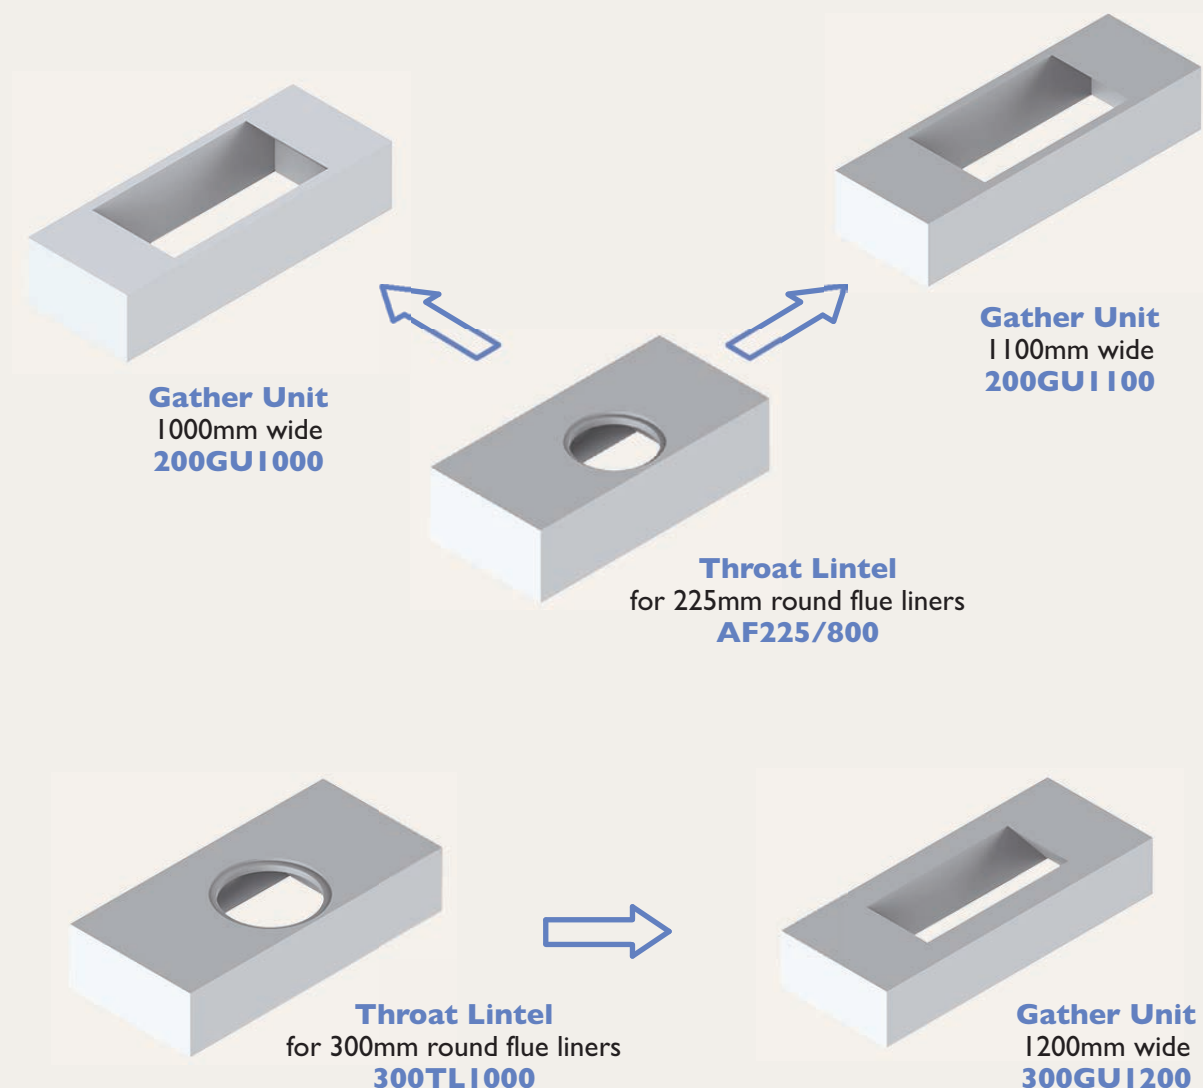

### Throat Lintels and Gather Units

A throat lintel is traditionally used in combination with a gather unit to form a fireplace recess and to support the chimney flue liner and provide a smooth passage of the flue gases into the flue liner.

The size of the fireplace opening determines the flue liner size and the need for a gather unit.

Throat lintels are sized by the inside diameter of the round flue liner and are available to suit 225mm and 300mm flue liners. Gather units are available in the widths shown.

**This Data Sheet Shows the Pairing Options of Throat Lintel and Gather Units.**

Further information on Lintels and Gather Units is available at [www.wtknowles.co.uk](http://www.wtknowles.co.uk)
